

Decon Pro Clean®

Neutralization of Chemical & Biological Contaminates

Decon Pro Clean

Decon Pro Clean® from Hygiene Pro Clean® is a non-toxic biodegradable decontamination solution formulated to neutralise chemical and biological hazards for use in conjunction with our range of Atomizer delivery systems.

Benefits

Decon Pro Clean® formula fights against:

- Toxic Industrial Materials
- Chemical and Biological Contamination
- Bio Pathogens
- Deadly Diseases and Viruses
- Bacteria and Spores

Targeted at:

- Emergency Services
- Trauma and Crime Scene Clean Up
- Disease Control and Emergency
- Specialist Deep Cleaning
- Food Preparation Industry

Decon Pro Clean® is a revolutionary technology that is non-corrosive and non-toxic. It is deployed as an aqueous mist or light foam with enhanced physical stability for the rapid migration and decontamination of Chemical and Biological and toxic hazardous material.

The formula also contains several stabilising compounds which help to extend shelf-life, making it more cost effective. The stabilisers also control the chemical reaction so that decontamination occurs in a safe manner.

Decon Pro Clean® is safe to use in virtually any indoor remediation application including prisons, military camps and ships or any type of commercial building. This biodegradable product is a broad spectrum detergent with good efficacy and efficiency based around its surfactant qualities.

Decon Pro Clean® can only be delivered using the Atomizer and is safe to handle. This product can be shipped by sea or by air freight.

Coating and Treatments

Hygiene Pro Green®

A unique non-toxic formula aimed at all levels of infection control and domestic cleaning

Spore Clean®

HPC have developed a non-toxic surface coating which can be applied to almost any surface for extended protection against microbes and bacteria

DECON PRO CLEAN®

- Scientifically and independently proven by Sandia National Laboratories
- Decon Pro Clean® kills pathogens such as Ebola, Influenza A, Norovirus and SARS
- Cost effective coverage when used in conjunction with the Hygiene Pro Clean® Atomizers
- Environmentally friendly and biodegradable
- Fast Acting
- Long Lasting
- Cleans and decontaminates most surfaces

Atomizing Delivery Systems

The **Ultrasonic Atomizer Range** can be used for either decontamination, disinfection or surface treatment. The Atomizers deliver a fine mist or spray which can dampen a surface without excessive wetting making it a cost effective and efficient method of applying our specialised range of chemical solutions. All our Atomizers have an adjustable spray pattern which can deliver either an ultra-fine mist or even a light foam, dependant on the specific application. All these units are driven by their individual compressed air cylinders to deliver a medical grade solution.

ATOMIZING DELIVERY SYSTEMS RANGE

The Hygiene Pro Clean® Ultrasonic Atomizer is a mobile or portable cleaning system which can deliver a number of coatings and treatments contained within the unit which have been developed for Atomization.

Ultrasonic Atomizer Back Pack - MBU/2L

The smallest but most versatile of the Atomizer range is the compact Back Pack unit which is ideal for use in confined areas. The Back Pack can deliver two litres of chemical or surface treatment from its integral cylinder.

Portable Ultrasonic Atomizer - MUA/18L

The MUA/18L is our portable commercial Atomizer trolley for larger everyday applications of disinfection, decontamination and surface treatment. This unit can deliver up to 18 litres of stored chemical from one compressed air cylinder. Alternatively, connect to an optional air compressor for constant use. NOTE: MUA/18LE Electric version available

Ultrasonic Atomizer Infection Control Trolley - UAICT

The mobile UAICT is a complete cleaning system which can be incorporated into everyday low, medium and high level cleaning and infection control. This unit incorporates our Ultrasonic Atomizer which can deliver up to 18 litres of its stored chemical or treatment from one compressed air cylinder. NOTE: UAICT/E Electric version available

The Infection Control Trailer - ICT

The ICT is a purpose built trailer with a hydraulic lowering and self-levelling chassis and when fitted with our Ultrasonic Atomizer system with inboard storage and waste tanks it is a fully independent unit for carrying out large scale disinfection, decontamination or surface treatments. NOTE: Other units available on request

We are able to offer a range of Self-Sanitising, Surface Coatings and Treatments on request.
